BASE & CASTER

**Headrest**  
The height can be adjusted according to the user's body shape, and the headrest will comfortably support it like its own tension function.

**Hight elasticity soft mesh**  
The high elastic soft mesh applied to the backrest prevents slippage during use and maintains the optimum state without slack phenomenon even during use for a long time.

**Synchronized Tilting**  
Synchronized tilting which the platform and the stand are moving at different angles is applied and it is possible to maintain the relaxed state in various postures.

**Lumbar support (Pad type)**  
The height adjustment and the depth adjustment are implemented simultaneously with the backrest pad type, and it is possible to adjust to the optimum state according to the body type and the business activity.

**Lumbar support (Lever type)**  
The pair of lever in the backrest are simultaneously adjusted by user. It is possible to adjust to the optimum state according to the body type of user.

**Adjustable Armrest**  
Adjustable armrests are adjustable in height, front and back, and width of right and left, and can be adjusted according to the user's body shape and posture.

**Fixed Armrest**  
A rectangular plastic fixed armrest is set with its position and angle based on engineering numerical value. Anyone can use it comfortably.

**Seat depth adjustable**  
You can adjust the height of the chair according to the user's body shape and posture to achieve the optimum height.

**Multi Mechanism**  
When using the left handle of the lower part of the stand when you warp the chair's backrest, the user can fix the backrest in the desired place.

**Tilting tension adjustable**  
When using the right side of handle during user warp the chair's backrest, can fixed the tension easily.

**Base, Castor**  
Applying a nylon castor to minimize floor scratches is prevent noises and scratch the floor.

FUNCTION J2 SERIES

Modern & Classic

**Headrest**  
The height can be adjusted according to the user's body shape, and the headrest will comfortably support it like its own tension function.

**High elasticity Fabric**  
The fabric applied to the backrest are strong for pollution and perfect without slack phenomenon even during for a long time use.

**Synchronized Tilting**  
The Back and Seats are up to Synchronized Tilting which makes user any position in comfort condition.

**Lumbar support**  
The height adjustment and the depth adjustment are implemented simultaneously with the backrest pad type, and it is possible to adjust to the optimum state according to the body type and the business activity.

**Adjustable Armrest**  
Adjustable armrests are adjustable in height, front and back, and width of right and left, and can be adjusted according to the user's body shape and posture.

**Fixed Armrest**  
A rectangular plastic fixed armrest is set with its position and angle based on engineering numerical value, Anyone can use it comfortably.

**Seat Depth Adjustment**  
You can adjust the height of the chair according to the user's body shape and posture to achieve the optimum height.

**Multi Locking**  
When using the left handle of the lower part of the stand when you warp the chair's backrest, the user can fix the backrest in the desired place.

**Tilting tension adjustment**  
When using the right side of handle during user warp the chair's backrest, can fixed the tension easily.

**Base, Castor**  
The base of nylon material stably supports the chair, urethane caster can prevent noise and floor scratches.

## FUNCTION E1 SERIES

### Multi-Use & Affordable

#### Mesh

Mesh fabric in the Back, Seat keeps the optimum state without loosening phenomenon even for long time use.

#### Synchronized Tilting

The Back and Seats are up to Synchronized Tilting which makes user any position in comfort condition.

#### Fixed Armrest

Plastic fixed armrests for each model can be used comfortably by anyone with their position and angle set based on human engineering numerical values.

#### E1-M100 Synchronized Tilt

With the Back and Seat up to Synchronized Tilting, Mechanism Tilt locking is available for tension adjustment or slope regulations.

#### E1-G100 Synchronized Tilt

With the Back and Seat up to Synchronized Tilting, Mechanism Tilt locking is available for tension adjustment or slope regulations.

#### E1-E100 Back Tilt

Back tilt function where the backrest is warped, the strength can be adjusted with the lower circular handle, and there is the function of the tilt prevention lever.

#### E1-E200 KNEE-TILT

Easy KNEE tilt function where the backrest are warped back and seat at the same time, the strength can be adjusted with the lower circular handle, and there is the function of the tilt prevention lever.

#### Height Adjustment Lever

You can adjust the height of the chair according to the user's body shape and posture to achieve the optimum height.

#### Base, Castor

The base of nylon material stably supports the chair, urethane caster can prevent noise and floor scratches.
